E' possibile combinare la carta da parati in vinile e un sottile foglio di legno preverniciato? E' possibile combinare colore, grafica, maternità e tutte le caratteristiche migliori di questo due materiali per dare vita a un progetto unico ed esclusivo? E' possibile riportare in vita l'intarsio, una tecnica artistica millenaria grazie all'unione di due eccellenze?

Or.nami presenta Wood Decorations.

*Is it possible to combine vinyl wallpaper with a thin pre-painted wooden sheet? Is it possible to mix the best features of these two materials - colors, graphics and texture - in order to start a unique and exclusive project? Is it possible to blend together these two excellences to breathe new life into the ancient inlay technique?*

*Or.nami presents Wood Decorations.*

### Caratteristiche

Pannelli:  
Larghezza: 50 cm  
Spessore : 0,7 mm  
Peso: 800 gr\mq  
Posa: incollato

Utilizzo:  
Rivestimento

Lavorazione:  
Bagno colore, taglio e intarsio

Materiale:  
Legno e fibra tecnica

### Features

*Panels:*  
*Width: 50 cm*  
*Thickness: 0,7 mm*  
*Weight: 800 grams\sq.m.*  
*Laying material: stuck*

*Utilization:*  
*Coating*

*Processing:*  
*Color bath, cut and inlay*

*Material:*  
*Wood and technical fiber*

### ROVERE

Il Rovere (*Quercus Petraea*) è una quercia caducifoglie appartenente alla famiglia delle Fagacee. Il nome specifico indicherebbe proprio il fatto che la pianta ama i luoghi pietrosi e ben drenati. Il legno è di colore bruno tendente al giallo, con tessitura media e fibre dritte; ha una buona durezza, stabilità e durabilità, tutte qualità che migliorano con la stagionatura. La quercia rovere è stata oggetto di culto per i popoli europei, i quali vedevano la pianta come rappresentante di forza, longevità e solidità. Gli antichi romani ritenevano il ramo di quercia un simbolo di virtù, coraggio, dignità e perseveranza.

### BOLIVAR

Il Bolivar (*Tulipier*) appartiene alla famiglia delle Magnoliaceae. È diffuso nelle zone sud-orientali degli Stati Uniti, ma viene coltivato anche in altri paesi ed in Europa. Alburno e durame sono nettamente differenziati. L'alburno è stretto, biancastro, spesso con rigature chiare. Il durame varia dal giallo chiaro al giallo brunastro con zone scure-grigio o grigio-verdastre. Gli anelli di crescita sono difficilmente riconoscibili ad occhio nudo. Ha tessitura compatta, regolare con fioritura dritta. Il Tuliper si lavora facilmente e le superfici piallate e levigate presentano una finitura opaca molto bella. Può essere anche tinteggiato e verniciato con facilità.

### OAK

The Oak (*Quercus Petraea*) is deciduous tree which belongs to the Fagacee family. The specific Latin name indicates that the plant loves rocky, well-drained places. The wood is a light brown color tending to yellow, with a medium grain and straight fibres; it has good hardness, stability and durability, all qualities which improve with aging. The Oak was the object of religious worship for the European people, who viewed the plant as a representation of strength, longevity and solidity. The ancient Romans considered the Oak branch a symbol of virtue, courage, dignity and perseverance.

### Bolivar

The Bolivar (*Tulipier*) belongs to the Magnoliaceae family. It is widespread in the south-eastern parts of the United States, but is also cultivated in other countries and in Europe. Sapwood and heartwood are clearly differentiated. The sapwood is narrow, whitish, often with light lines. The heartwood varies from light yellow to brownish yellow with dark-gray or gray-greenish areas. Growth rings are hardly recognizable to the naked eye. It has a compact, regular texture with a straight flowering. Tuliper is easy to work with and the planed and polished surfaces have a very nice matte finish. It can also be easily tinted and varnished.

#### HANGING INSTRUCTIONS

*Wood Decorations is a pure wood product requiring prompt attention for a correct laying. Special adhesives and primers to guarantee the best technical performance.*

#### PREPARATION

*WD needs vertical smooth surfaces and I or with gypsum-based skimming. Make sure that there are no humidity halos, dirt or dust. It is recommended to apply WD on walls showing similar shades and to use the special primer.*

#### APPLICATION

*It is recommended to use advised layers or in possession of laying qualification. Apply with temperature between 15° and 38°. Pay special attention to draughts of air that could interfere with glue setting. The sheets can be trimmed during laying and jointed by putting them together.*

#### CLEANING

*Do not use abundant water, products containing solvents. Use a humid microfiber cloth and neutral soaps in small doses.*

#### A+ RESPECT FOR ENVIRONMENT, RESPECT FOR PEOPLE

*Or.nami Wood Decorations comes from Nature providing an important support in creating milieux whose salubrity of air is at the highest levels. The release into the environment of substances harmful to humans, such as volatile organic compounds (VOC or COV) like benzene and formaldehyde, is a crucial aspect: Or.nami Wood Decorations owns the A + certification thanks to its characteristics and guarantees the highest requirements respecting environment and human health. OnDemand: fire & smoke Rating ASTM E 84-19b class A*
